

Data Mining in Action – Amazon

the problem: shopping at amazon, which world's largest online shopping website can be overwhelming.

how data mining is implimited, it uses the analysis of the customers browsing history and their purchase history and what previus people with similar histories and interests purchased. and based on these patterns it provides personalized recommendations. It item-to-Item Collaborative Filtering method, instead of comparing *users to users*, Amazon compares **items to items**..

Its impact: it makes shopping eaiser and faster for the customer. it also increases amazons sales and customer satisfaction.
